

SERVICES INCLUDE

Construction and demolition waste material tracking and documentation

During construction, the waste material from your project will be tracked and the percentage of material diverted from the landfill will be documented in a form acceptable for LEED certification and the NAHB Green Building program.

Container placement and hauling

TnWaste personnel will deliver empty waste containers to your jobsite and transport the filled containers to our recycling facility.

Recycling and diversion of waste materials

No onsite construction waste manager is required. All construction waste materials will be placed in one container and shipped to the TnWaste recycling facility for sorting and processing.

TnWaste's recycling facility is approved and permitted by the Tennessee Department of Environment and Conservation.

TnWaste recently invested in a complete upgrade of our construction waste recycling infrastructure. It's our way of helping to keep East Tennessee skies blue.

We hope you'll **do your part** by taking advantage of our expanded recycling services on your next job.

Be responsible. Go green.

EAST TENNESSEE'S PREMIER C&D RECYCLING SERVICES PROVIDER

- ✓ Earn points for LEED certification and NAHB Green Building programs
- ✓ New easy-to-use service eliminates jobsite sorting
- ✓ Documentation provided by TnWaste
